

RevenantVape Firmware update guide

1 Download the software and install it

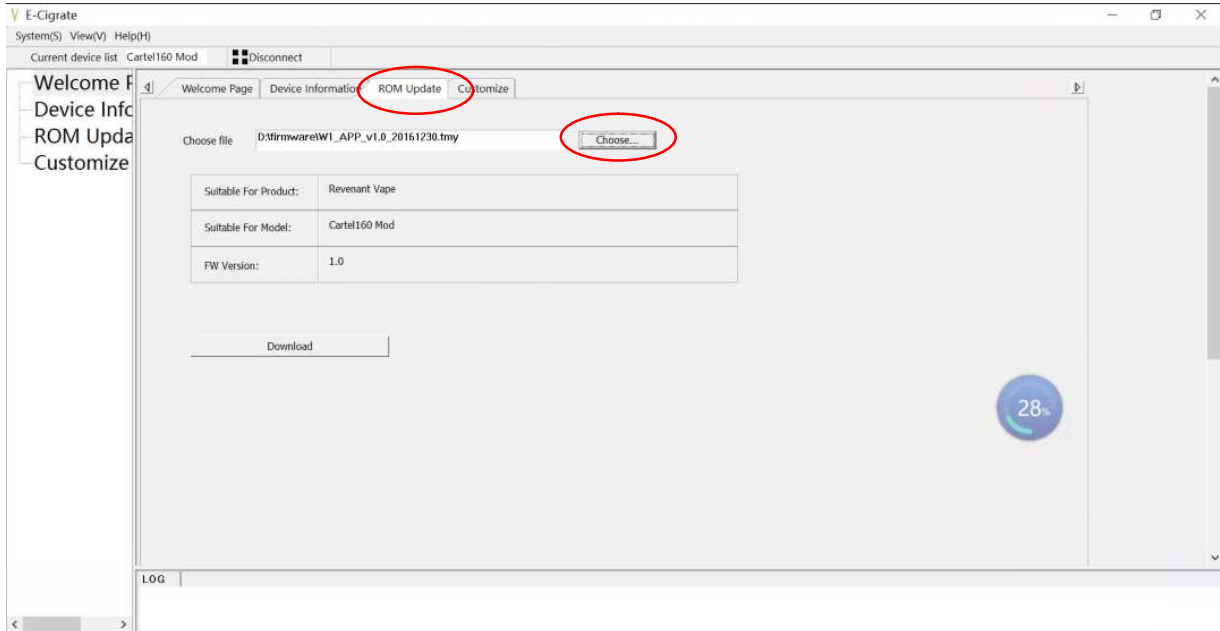

2 Run it and connect your Revenant Cartel 160 mod while system is off. Pull out the battery, and hold down the fire button then plug it into the pc to get connected, only release the fire button after connection is successfully built.

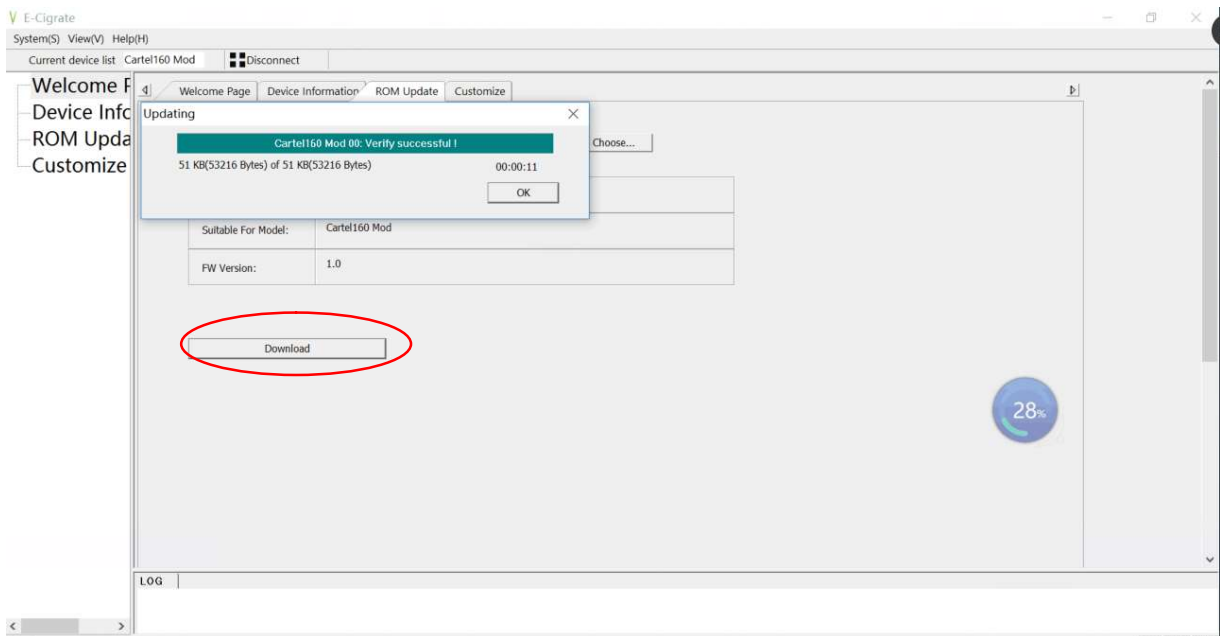

The name of your device will appear in Current Device list blank after the connection is built

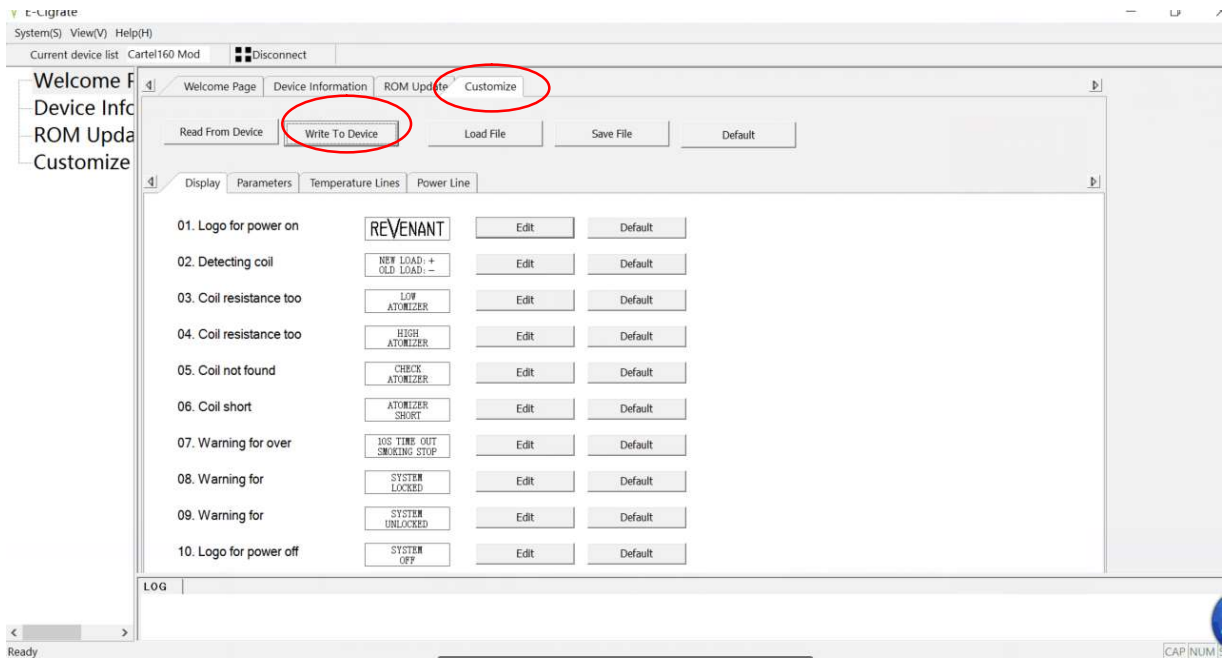

3 Go to “Rom Update,” choose, and accordingly select the latest firmware update that you shall have downloaded from the website

4 Press the download button to update the firmware. Wait until the updating percent reach 100%.

5 To customize the firmware function and display go on “customize.” This section will include customization of the watts and temperature curve. After the customize work is done, click Write to Device button so that the set will be written to your mod.

7 Finally, click Disconnect button. Pull out the cable of your device and turn it on. Enjoy vaping your updated device now!
